YOU HAVE REQUESTED DATA FROM FILE 'BIOSIS, EMBASE, CAPLUS' - CONTINUE? (Y)/N:y

L1 ANSWER 5 OF 5 CAPLUS COPYRIGHT 2002 ACS
 AB Methods of modulating lipid prodn. in cells and whole organisms by DNA shuffling are provided. Single genes, operons, lipid biosynthetic cycles and whole genomes can be recombined to produce cells and organisms with desirable lipid synthetic or metabolic activity. Libraries of recombined lipid synthetic nucleic acids and organisms are also provided. Modification of lipid satn., fatty acid compn., fatty alc. compn., wax compn., acyl chain length, location of fatty acid accumulation, triglyceride yield, substrate specificity, expression level, are described. A decrease in susceptibility to protease cleavage, high or low pH levels, extreme temps., are also claimed. A decrease in toxicity, and modification of methyltransferase activity resulting in formation of branched chain, cyclopropyl, methoxy, or keto fatty acids, are also described. Use of two-hybrid system in detecting the changes in lipid biosynthetic activity is also claimed. Screening of libraries, such as phage display library is described. Crop plants such as corn, peanut, barley, millet, rice, soybean, sorghum, wheat, oats, sunflower, or nut whose lipid biosynthetic activity modified, are claimed. DNA shuffling is a powerful process for directed evolution, which generates diversity by recombination, combining useful mutations from individual genes.

L2 ANSWER 1 OF 1 CAPLUS COPYRIGHT 2002 ACS
AB In an effort to identify plastid genes encoding SRP (signal recognition particle)-assocd. RNAs, the authors screened the EMBL database of organelle genomes with the ***Synechocystis*** SRP RNA sequence. A region of the plastid genome of the red alga, Porphyra purpurea was found to be very similar to the cyanobacterial SRP RNA gene. This putative SRP RNA gene lies between apcD and ***fabH***. Rescreening the database with the P. purpurea sequence identified a potential homolog in the plastid genome of the diatom, Odontella sinensis.
